Project #12408 – Revision of Observation Sites for 2012 Alabama Occupant Restraint Survey Design

http://utca.eng.ua.edu/projects/new_project_results.asp?new_project=12408&submit=search
Record Type: UTC

The objective of this project is to revise the observation sites selected in UTCA project #11404 for a new occupant restraint survey design being prepared by the Alabama Department of Public Health (ADPH). The revisions include 1) adding interstate exit ramps to the sampling framework and select 50 exit ramps to include in the survey design; 2) eliminating and replacing ineligible observation sites that are too long, too short, subject to limited access, or cul-de-sacs; and 3) estimating the selection probability of each observation site. The final product of the project will be a list of observation locations and the selection probability of each location for forty counties pre-chosen by ADPH.
